Note: Priest (2011) is listed with a $1.45bn box office and a $781M budget, which appear to be data errors. It is kept as supplied and lowers Horror's ROI.

Average Box Office by Runtime (30-min bands)

Best Movies Dashboard: Key Insights & Recommendations (1997–2015)

Key Insights

Adventure & Action lead: $90bn combined, and the entire top 10

Drama: highest-rated major genre (3.43) but lowest ROI (139%)

PG/PG-13 films earn 2–3× more per film than R

May–July: ~25% of releases, ~40% of box office

Disney earns ~$430M per film vs Universal's ~$290M

Recommendations

Build the slate around Adventure/Action franchises

Balance it with low-budget, high-ROI genres (Horror, Rom-Com)

Target PG-13/PG for big budget films

Release tentpoles in May–July or November–December, and avoid January, September and October.

Invest in proven franchises and directors

Source & scope

Dataset: Best Movie dataset, 1,000 films released 1939–2015

The dashboard defaults to 1997–2015 (983 films); use the Release Year slider to view all years

Data ends 7 August 2015, so 2015 is a partial year

The three slicers (Year, Genre, Age Rating) are synced across all pages

Definitions

Profit = Global Box Office - Budget

ROI % = Total Profit ÷ Total Budget

Avg Box Office per Movie = Total Box Office ÷ Number of Movies, used to compare groups of different sizes fairly

The Rotten Tomatoes rating appears to use a 0–5 scale

Data quality

Priest (2011): the $1.45bn box office and $781M budget appear erroneous; kept as supplied, and it lowers Horror's ROI

95 runtimes and 72 critic ratings were recorded as 0; they're treated as missing and excluded from averages

Fantastic Four and Godzilla each appear twice; these are remakes, not duplicates, so both are kept

Studio names are as recorded, so Disney's output is split across several labels

Reading the visuals

ROI excludes marketing, distribution and the cinemas' share of revenue, so real studio profit would be lower

Small samples (Western, Concert/Performance, Documentary, G, NC-17) can produce extreme values; hover to see film counts

The runtime chart excludes films with no runtime and the 30–59 min band (1 film)

Correlation is not causation: longer films earn more because they're usually blockbusters
